Cardiorespiratory Pharmacology: A Self Assessment 1388 Questions With Referenced Answers

by Thomas J Williams William A. Syvertsen

Chapter 9: Evaluation of the Patient with Cardiovascular Disease

What are the basic self-monitoring components for cardiovascular disease? The first question often asked when evaluating a patient is, “What is your blood pressure?”. This answer gives us an initial number of clues, but it is not completely reliable to assess cardiovascular drugs. Drugs can lower cardiovascular mortality by 5-30%, depending on the factors, perhaps with coaches or personal trainers and financial incentives.
