by John R Sutherst

Gynaecological & Urological - Sutton Coldfield, Birmingham, West. Introduction to clinical gynaecological urology. 

Urology combines the management of medical (i.e., non-surgical) conditions, such as of) oncology, nephrology, gynaecology, andrology, pediatric surgery, colorectal surgery, gastroenterology, and endocrinology. Urology is an interdisciplinary specialty that involves the care of patients with diseases of the urinary and reproductive systems. The urologist is a specialist who diagnoses and treats diseases and disorders of the kidneys, bladder, urethra, prostate, and reproductive organs in both men and women.
