CoronaVirus and the Nervous System. The ACE-R1 is a brief cognitive test that assesses five cognitive domains, namely attention/orientation, immediate memory, learning, problem solving, and language. Performance on the ACE-R1 is compared to normative scores to identify cognitive impairment. The ACE-R1 is a quick and easy way to screen for cognitive impairment, which can be a sign of neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease. These diseases are often associated with cognitive impairment and can affect daily living activities. The ACE-R1 is a useful tool for screening for cognitive impairment in individuals with neurological conditions such as stroke and multiple sclerosis.
